

WHO Guideline on Diabetes Care

Published: 15.03.2024

doi:10.1234/who.2024.001

1 Scope

This guideline covers screening and management of type 2 diabetes in adults across primary care settings worldwide.

2 Recommendations

Metformin is recommended as first line therapy for most adult patients with type 2 diabetes.

2.1 Monitoring

HbA1c should be measured every three months during dose titration and every six months once stable.
